Fix 31 Oct: not every person gets a box

Cause: the code tracked at most **4 people**. Takes with 5 people always miss one, and that person's gestures never reach the labelling tool, so they can't be fixed during labelling.

Fix: the limit is now 6. Every take is re-detected from the saved video and depth, so **nothing has to be recorded again**. Only the labelling has to be redone.

Steps (on the recording laptop)

1. **Stop labelling** for now.
2. Put the new files in place. The laptop's code was adapted for Windows, so **don't overwrite files**; let Claude Code apply the change. Open Claude Code in the project folder and paste:

> Apply the 31 Oct fix from FIX_31OCT.md without undoing our Windows changes: (1) in engage/engage/perception.py set the Perception default `max_people=6` and store `self.max_people = max_people`; (2) in engage/run_live.py add `"max_people": getattr(perc, "max_people", None)` to meta.json; (3) add the new file engage/reprocess.py from this update (adapt paths for Windows if needed); (4) in engage/label_episodes.py draw the other people's boxes thicker (2 px, light blue) with their #id; (5) in engage/check_dataset.py flag raw_format-2 takes whose meta max_people is missing or below 6. Don't change anything else in the method.

1. Re-detect all recorded takes (about 1–3 minutes per take): `python reprocess.py` Old labels are kept in each take's `labels_old/` folder.
2. **Label every take again** (A and B), then run `python check_dataset.py` until it says no problems.
3. In the remaining sessions: **at most 5 people** in the picture, everyone **fully inside the frame** (not cut at the edges).

Which gestures?

Not just any hand movement. Only these 5 count as commands:

Gesture	How	Command
Palm	Open hand, fingers spread, palm facing the target	STOP
Fist	Closed fist facing the target	Forward
Call	Thumb and little finger out, like a phone	Backward
One	Index finger up	Turn left
Two-up	Index and middle finger up, held together	Turn right

- **Commander and bystanders use the same 5 gestures.** Only the target differs: the dog for the commander, another person for a bystander.
- Hold each one **about 2 s** at chest height, with the hand clearly visible to the camera, then drop it.
- Other hand shapes (thumbs up, OK, peace sign, waving) aren't commands; the system ignores them. Don't use "finger on the lips" (it's read as Backward).
