Consent to be recorded

Research study: gesture commands to a quadruped robot in groups of people

We are studying how a robot dog can tell whether a hand gesture is meant for it or for another person. In this session you will stand near the robot and make simple hand gestures, sometimes to the robot and sometimes to other people, for about 1–2 hours in total.

- A camera on the robot records **colour video and depth** of you.
- Recordings are used only for research by the project team. In any published paper, poster or video, **faces will be blurred**.
- Your name is written only on this form and on the paper participant sheet. In all data files you are identified only by a code (e.g. P03).
- The robot moves slowly and a safety driver can stop it at any time. You can ask to stop at any moment.
- Taking part is **voluntary**. You can withdraw at any time, including after recording, and your recordings will be deleted.

I have read the information above and agree to take part and to be recorded.

Name: _____ Participant code: _____

Signature: _____ Date: _____

I agree that a clearly **blurred** video of me may be shown in public research material: ☐ Yes ☐ No

Questions or withdrawal: contact the project lead, _____

Participant sheet (keep private, never photograph or upload)

Give each person one code and use the same code on every day.
